

WATER BREAK - REPAIRED

Cemetery Way, Elevator Road, Starland County Customers

The water break has been repaired and the mains have been flushed.

It is recommended that these houses flush their COLD water lines, such as the outside faucet, for about 15 minutes to clear your service connection.

(Do not flush the hot lines in order to keep the first water from entering the hot water tank.)

It is recommended that that drinking and cooking water be boiled to a rolling boil for one minute before consumption, until the water tests have been received back.
